Using Data

Data Leadership Academy: Lead Instructional Change

Description

Learn the skills you need to use data to lead instructional excellence in your school. Apply a proven data collection and analysis process to identify and close gaps in instruction, achievement, and opportunity. Understand a clear roadmap for success, combining best practices in leadership, collaboration, effective instruction, assessment, and professional development.

Intended Audience

Superintendents, Assistant Superintendents, Principals, Assistant Principals, Department Heads.

Learning Outcomes

Participants will:

❏ Understand how a disciplined, consistent approach to the use of data is the cornerstone of systemic improvement

❏ Articulate a positive vision for ongoing data use in your school that will inform teaching and impact learning

❏ Form and support collaborative data leadership team(s)

❏ Organize the data you have and identify the data you will need to lead ongoing improvement

❏ Apply proven processes for analyzing data and identifying a course of action that will have the greatest impact on your school community

❏ Use data to align classroom instruction to curriculum standards

❏ Identify and address specific curriculum, instructional, and assessment needs for all learners,

The Data Leadership Academy is delivered in a two-day format and can be customized to support strategic initiatives in a district.

Using Data Solutions offers several high-quality and practical 1-day workshops that help build data literacy skills leading to improved outcomes.

However, our primary commitment is to help education leaders plan comprehensive professional development programs that are customized to local needs and that build collaborative inquiry and data literacy skills across all stakeholders in a school or district.
